SUMMARY

Engineering lead with **~5 years** of building and shipping products. I set technical direction, review code, mentor engineers and own how the team ships. Full stack with a **backend focus**: **TypeScript, Node.js, PostgreSQL** and **Cloudflare**.

EXPERIENCE

Selegic India · Senior Software Engineer — Jan 2022 – Present

Lead the engineering team behind **Selegic CRM**, a platform I designed and took to its first release **on my own in five months**, and which industry users are now piloting. I turned it into a product the whole team builds on, with an extension kit for outside developers, workflow automation and AI agents that respect user permissions. Outside the CRM, I built **Migrata**, now on **Salesforce AppExchange**, and the time-tracking platform used across the company.

Leadership

- Lead the Selegic CRM team: set **architecture and priorities**, break work into deliverables, **review code** and **mentor engineers**.
- Set up how the team ships: one shared codebase, a **preview of every change**, **5,400+ automated tests** that gate each release, and staged rollouts. **236 changes** shipped this way since Jul 2026.
- Set engineering standards so others can build safely: **type-safe contracts** between services, **sandboxed custom code** and a clear **access model**.
- Gave every engineer an **isolated environment per branch**, with its own ports and database, so the team works in parallel.
- Work across teams: with **designers** on the CRM and website, and with the **CPQ team** on their CRM integration.

Selegic CRM (pre-release, in pilot with industry users) — Aug 2024 – Present

- Shipped **v1.0.0 alone in 5 months**, then led the rebuild on **Cloudflare Workers, Hono, TanStack Start** and **Neon Postgres**.
- Cut server response time from **2–7 s to under 0.3 s** by merging the backend into **one Cloudflare Worker**.
- Made new workspaces usable in **~2–4 s instead of ~48 s** with a **pre-warmed schema pool** and **5× fewer** setup queries.
- Shrank the browser bundle by **87% (1.56 MB → 209 kB)** and cut notification database load by **~83%** with **SSE**.
- Opened the product to outside developers with a public **extension SDK and CLI**, versioned publishing and isolated server code per version.
- Built a **durable flow engine**, a **sandboxed formula engine** that validates every write, and a metered **AI kernel** that checks permissions before agents act.

Migrata (released on Salesforce AppExchange)

- Built the platform: **automated multi-org data migration** in **Node.js** that replaced manual CPQ deployments with a repeatable, validated pipeline.

Selegic Internal (released) — Apr 2025 – Aug 2026

- Built the company's time-tracker **end to end** and shipped it to **v1.6.0**: Google sign-in, 3 role tiers, emailed timesheets.

Doc Gen (released)

- Built the service that turns Salesforce records into **DOCX and PDF** from templates, used from a **web editor**, a **public REST API** or a **Salesforce quick action** (Apex, LWC).
- Moved rendering from the browser to a **Python (FastAPI) and LibreOffice service** in a **Cloudflare Container**, adding PDF output; then, with my team, cut PDF generation from **12–13 s to ~1–2 s** by keeping LibreOffice and the container **warm**.

Earlier work

- **AttentaFit** (released, later withdrawn): native iOS fitness app in **SwiftUI**; built onboarding, workouts with a **custom video player**, diet plans and **meal logging**, trainer booking, chat and **in-app subscriptions** (HealthKit, StoreKit).
- **Attenta Yoga** (released, later withdrawn): built **session booking with payments**, audio and video players with a **mini player and lock-screen controls**, a sound mixer and alarms, and **share links**; shipped App Store builds 1.0.5–1.0.7.
- **Switch to Classic & Remote Tooling** (released): Salesforce Chrome extension and admin tools in Angular and Node.js.

SKILLS

Leadership	Technical direction, system design, code review, mentoring, delivery planning, cross-team work
Backend	Node.js, TypeScript, Hono, Express, REST, RPC, PostgreSQL, Redis, Prisma
Frontend & Mobile	React, TanStack, Next.js, Angular, Swift, SwiftUI
Cloud & DevOps	Cloudflare Workers, Google Cloud, AWS, Docker, GitHub Actions, Playwright, Vitest
Salesforce	Apex, Lightning Web Components, CPQ, AppExchange

EDUCATION

B.Tech, Computer Science · Maulana Abul Kalam Azad University of Technology (MAKAUT) — 2018 – 2022

CGPA 8.45
