Riju Dev Purkayastha

Senior Software Engineer · Engineering lead, Selegic CRM

Kolkata, India · +91 86975 77581 · rijudev12@gmail.com · linkedin.com/in/rijudevpurkayastha · github.com/RIJUDEVx

SUMMARY

Engineering lead with 4+ years of building and shipping products. I set technical direction, review code, mentor engineers and own how the team ships. Full stack with a backend focus: TypeScript, Node.js, PostgreSQL and Cloudflare.

EXPERIENCE

Selegic India · Senior Software Engineer — Jan 2022 – Present

Lead the engineering team behind Selegic CRM, a platform I designed and took to its first release on my own in five months, and which industry users are now piloting. I turned it into a product the whole team builds on, with an extension kit for outside developers, workflow automation and AI agents that respect user permissions. Outside the CRM, I built Migrata, now on Salesforce AppExchange, and the time-tracking platform used across the company.

Leadership

- Lead the Selegic CRM team: set architecture and priorities, break work into deliverables, review code and mentor engineers.
- Set up how the team ships: one shared codebase, a preview of every change, automated tests that gate each release, and staged rollouts. 236 changes shipped this way since Jul 2026.
- Set engineering standards so others can build safely: type-safe contracts between services, sandboxed custom code and a clear access model.
- Gave every engineer an isolated environment per branch, with its own ports and database, so the team works in parallel without clashes.
- Work across teams: with designers on the CRM and website, and with the CPQ team on their CRM integration.

Selegic CRM (pre-release, in pilot with industry users) — Aug 2024 – Present

- Shipped v1.0.0 alone in 5 months (Node.js, Angular), then led the rebuild on Cloudflare Workers, Hono, TanStack Start and Neon Postgres.
- Made new customer workspaces ready ~3× faster with a pool of pre-warmed tenant schemas.
- Opened the product to outside developers with a public extension SDK and CLI, versioned publishing and isolated server code per version.
- Built a durable flow engine, a sandboxed formula engine that validates every write, and a metered AI kernel that checks permissions before agents act.

Migrata (released on Salesforce AppExchange)

- Built the platform: automated multi-org data migration in Node.js that replaced manual CPQ deployments with a repeatable, validated pipeline.

Selegic Internal (released) — Apr 2025 – Aug 2026

- Built the company's time-tracking platform end to end and shipped it to v1.5.0: Google sign-in, 3 role tiers, emailed timesheets.

Doc Gen (released)

- Template-to-DOCX/PDF service for web, API and Salesforce; owned infrastructure, deployment and CPQ terms.

Earlier work — 2022 – 2023

- **AttentaFit & Attenta Yoga** (released, later withdrawn): top contributor on native iOS fitness apps in Swift (84 commits on AttentaFit).
- **Switch to Classic & Remote Tooling** (released): Salesforce Chrome extension and admin tools in Angular and Node.js.

SKILLS

Leadership	Technical direction, system design, code review, mentoring, delivery planning, cross-team work
Backend	Node.js, TypeScript, Hono, Express, REST, RPC, PostgreSQL, Redis, Prisma
Frontend & Mobile	React, TanStack, Next.js, Angular, Swift, SwiftUI
Cloud & DevOps	Cloudflare Workers, Google Cloud, AWS, Docker, GitHub Actions, Playwright, Vitest
Salesforce	Apex, Lightning Web Components, CPQ, AppExchange

EDUCATION

B.Tech, Computer Science · Maulana Abul Kalam Azad University of Technology (MAKAUT) — 2018 – 2022
CGPA 8.45
